ULTREK UT-43D - THE IDEAL TRAVEL TRIPOD SOLUTION

- 180 degree reversible legs
- Patented 6-section trunnion shaft system
- 2-section telescopic centre column
- Supplied with versatile QHD-53D ball & socket head

This amazing tripod heralds the birth of an exciting new breed of travel tripods from Velbon. The UT-43D is **extraordinarily compact** when folded – only 29.5cm, yet thanks to its **ingenious 6-section reverse-folding legs**, it can be extended to become a practical full-height tripod as well as a low-level macro platform.

New innovations include a **2-section telescopic centre column** and 6-section legs that fold by reversing through a full 180 degrees. This allows the maximum extended height to become 5.3 times the folded length!

The UT-43D tripod is the ideal travel solution as it packs small enough to fit into most bags and cases.

It comes complete with Velbon's **QHD-53D ball+socket head**, which includes a DIN standard platform for easy attachment to your camera. A soft carrying case is also included.

Features / Technical Spec:

- Maximum height: 156.5cm
- Minimum height: 29cm
- Folded length: 29.5cm
- Weight: 1.17kg
- Top leg diameter: 24mm
- Ideal max load: 3kg

Supplied with case, ball+socket head and quick release plate.
